10.2 Permutations and Combinations

Independent and Dependent Events

VOCABULARY -

- Outcome: The result of a single trial, experiment, or decision.
 - The possible outcomes of a coin flip would be heads or tails.
 - The possible outcomes of rolling a single die would be 1, 2, 3, 4, 5, or 6.
- Sample Space: The set of all possible outcomes.
 - The sample space for a coin flip is {H, T}.
 - The sample space for two coin flips would be {HH, HT, TH, TT}
- Event: One or more possible outcomes of a trial.
 - A coin flip coming up heads
 - o Rolling either a 2 or a 6 on a die
 - Choosing a face card from a deck of cards

Independent Events: The outcome of one event does not affect the outcome of another event.

- Two coin flips are independent because the outcome of the first coin flip does not affect the outcome of the second flip.
- Pependent Events: The outcome of one event does affect the outcome of another event.
 - Choosing a piece of candy from a jar and then choosing a second piece without replacing the first are dependent events because taking the first piece affects what is available to be taken

Examples: Decide whether the events are dependent or independent.

Choosing an ice cream flavor and then choosing a topping for the ice cream.

Independent

- 2. Choosing one book on which to write an essay on and then a different book on which to give a presentation. Dependent
- 3. Awarding 1st, 2nd, and 3rd prize to entries in an art contest.

Dependent

4. Selecting a fiction book and a nonfiction book from the library.

In dependent

Permutation and Combinations

• Permutation: An arrangement of a group of objects, where order matters.

Ex: Selecting a president, vice president, and secretary/lock combination/batting order

Permutation Formula (no repetition allowed) $P_r = P(n,r) = n!$ where *n* is the number of things you choose from and you choose *r* of them

• Combination: An arrangement or selection of objects in which order is not important.

Ex: Choosing Pizza toppings/selecting people to a committee

Combination Formula (no repetition allowed) ${}_{n}C_{r} = C(n,r) = \binom{n}{r} = \frac{n!}{r!(n-r)!}$ where n is the number of things you choose from and you choose r of them

Examples: Determine whether each situation involves a permutation of a combination.

1. In how many different orders can a person read 5 separate magazines?

order - permutation

2. You have just purchased 15 new songs and want to add them to a playlist. You don't want to remove any of the songs that are already on your playlist and there is only room for 5 more tracks. How many ways can you add 5 different tracks to the playlist?

3. You have 7 new movies on Netflix that you are dying to watch. You only have time to watch

3. You have 7 new movies on Netflix that you are dying to watch. You only have time to watch 3 this weekend. How many distinct ways can you watch the movies this weekend?

4. Honors English students are required to read 8 books from a list of 25. How many combinations could a student select?

NO proder Combination

5. You are Mr. Manager of a frozen banana stand. You need 5 employees and have 20 qualified applicants. How many ways can you staff the store?

no order Compination

6. Four members from a group of 18 on the board of directors at the Fa La La School of Arts will be selected to go to a convention (all expenses paid) in Hawaii. How many different groups of 4 are there?

From each in-

$$n P_r ext{ or } P(n,r) = n!$$
 $(n-r)$

$$-C(n,r)$$
 or $\left(\frac{n}{r}\right) = \frac{n!}{r!(n-r)!}$

Examples: Evaluate each expression

$$\frac{1. \quad _{0}P_{2}}{(6-2)!} = \frac{6!5\cdot 4\cdot \cancel{3}\cdot \cancel{4}\cdot \cancel{4}}{4\cancel{3}\cancel{2}\cancel{1}} = \boxed{30}$$

tamples: Evaluate each expression

1.
$$_{6}P_{2}$$
 $\frac{6!}{(6-2)!} = \frac{6 \cdot 5 \cdot 4 \cdot 3 \cdot 7}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15!}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 1} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 2 \cdot 11} = \frac{15 \cdot 11 \cdot 13 \cdot 12 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 1}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 11 \cdot 11}{4 \cdot 3 \cdot 11} = \frac{15 \cdot 11 \cdot 11 \cdot 11}{4 \cdot$

$$\frac{3. \, _{9}P_{6}}{(9-6)!} = \frac{9.8.7.6.5.4.3^{4}}{3!}$$

3.
$$_{9}P_{6} = \frac{9!}{(9-6)!} = \frac{9.8.7.6.5.4.3!}{\cancel{90,480}}$$
7. $_{C(12,4)} = \frac{12!}{\cancel{4!}(12-4)!} = \frac{12!11.18.9.8!}{\cancel{49.5}}$

$$\frac{25 \cdot 24 \cdot 23 \cdot 22 \cdot 21 \cdot 20}{(25 - 20)!} = \frac{25 \cdot 24 \cdot 23 \cdot 22 \cdot 21 \cdot 20}{5!} = \frac{9!}{2! \cdot 9 - 2!} = \frac{9!}{2! \cdot 9 - 2!} = \frac{9!}{2! \cdot 1} = \frac{9!}{2!} = \frac{9!$$

$${8.} {9 \choose 2} = \frac{9!}{2!(9-2)!} = \frac{9!8.7!}{2!1!} = 36$$

1.2926 00837 E23

no order Examples: Determine whether each situation involves a permutation or a combination. Then find the

1. Twelve skiers are competing in the final round of the Olympic freestyle skiing aerial competition. In how many ways can 3 of the skiers finish first, second, and third to win the gold, silver, and bronze

medals?

number of possibilities.

$$12P_3 = \frac{12!}{(12-3)!} = \frac{12\cdot 11\cdot 10\cdot 9!}{9!} = \overline{[1320]}$$

2. A pizza shop offers twelve different toppings. How many different three-topping pizzas can be

formed with the twelve toppings?
$$=\frac{12!}{3!(123)!} = \frac{12!}{32!} = \frac{12!}{3!} = \frac{12!$$

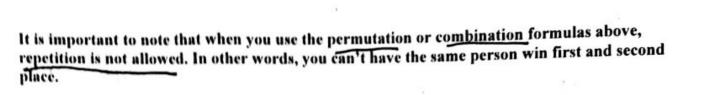

3. Your English teacher has asked you to select 3 novels from a list of 10 to read as an independent

Combination

project. In how many ways can you choose which books to read?
$$\frac{47}{3!}$$
 = $\frac{10!}{3!2!}$ = $\frac{10!}{3!}$ = $\frac{10!}{3!2!}$ = $\frac{10!}{3!2!}$

The school yearbook has an editor-in-chief and an assistant editor-in-chief. The staff of the yearbook has 15 students. How many different ways can students be chosen for these 2 positions?

$$15P_2 = \frac{15!}{13!} = \frac{5.14.13!}{13!} = 210$$

Another Case to Consider

Example: How many different ways can the letters HTAM be arranged to create four-letter "words"?

Solution: This is an example of a permutation because the order of the letters would produce a different "word" or outcome. So, we use the permutation formula:

$$_{4}P_{4} = P(4,4) = \frac{4!}{(4-4)!} = \frac{4!}{0!} = \frac{4 \cdot 3 \cdot 2 \cdot 1}{1} = 24$$

But, what if some of the letters repeated? For example, how many ways can the letters in <u>CLASSES</u> be rearranged to create 7 letter "words"? Since the letter S repeats 3 times, some of the permutations will be the same so we will have to eliminate them. Here is how we do it. There are 7 letters to choose from and we are choosing 7 of them, so we would have the following:

$$P_{1} = P(7,7) = \frac{7!}{(7-7)!} = \frac{7!}{0!} = \frac{7 \cdot 6 \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1}{1} = 5040$$
 Hold on – this is not our answer yet. We have to divide out our duplicate letters. As we mentioned earlier, the letter S repeats 3 times so we divide our

 $\frac{5040}{3!} = 840$

answer by 31:
